

Automated External Defibrillator (AED) Locations

Lee

College has placed automated external defibrillators (AEDs) throughout its campus and centers for use by untrained individuals in the event another person experiences a cardiac malfunction.

An AED is a portable device designed to be simple to use. An AED automatically diagnoses potentially life-threatening cardiac malfunctions in patients, and is able to treat them through defibrillation. Once turned on, an automated voice will direct the user in clear, easy-to-understand terms. However, the units alone cannot save a person. 911 must be called as soon as possible.

For more information, contact the Security Department at 281.425.6888.
